```
1
2 // CALCULATE THE AREA OF A RECTANGLE
3 var largeur = 2;
4 var longueur = 4;
5
6 // AREA = LONGUEUR * LARGEUR
7 var aire = largeur * longueur;
8
9 // SHOW RESULT
10 window.alert("Aire du rectangle = " + aire);
```

~~Théorie~~

Pratique

1. Go to <https://jsfiddle.net/>

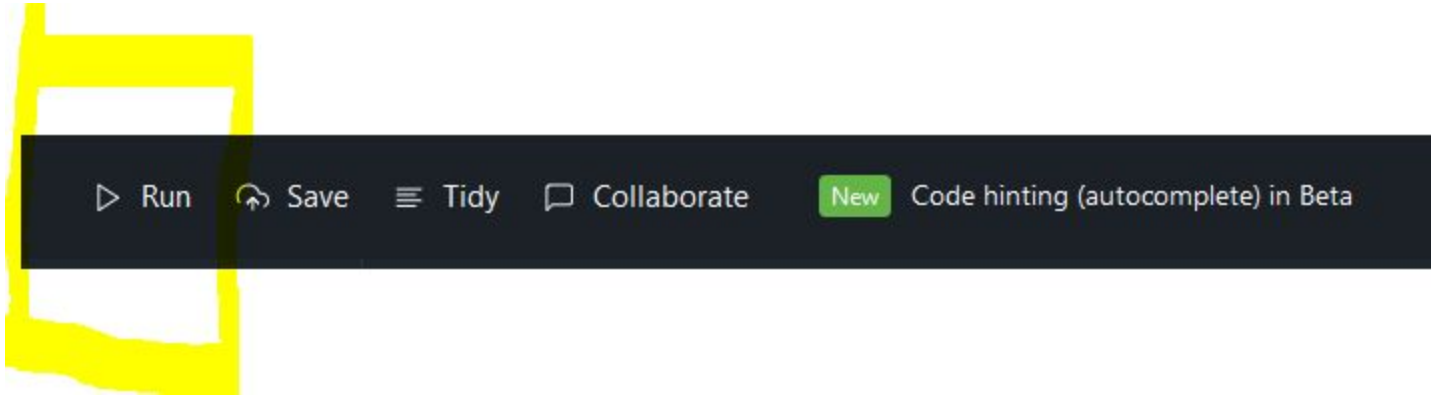

JSFiddle is an [online community](#) for testing and showcasing user-created and collaborative [HTML](#), [CSS](#) and [JavaScript](#) code snippets, known as 'fiddles'.

In short, you can code webpages without having to set your coding environment and see immediately the result.

2. Write any text in the “HTML” Box

3. Press “Run”

*** If you didn't see it, check the box "Result"
(right bottom box)**

It's time to

Spice

Things up

4. Add some attributes

Surround a part of your text with :

`<h1> </h1>` ex: `<h1> This text is a big title </h1>`

` ` : italic ex : ` This text is important `

` `: ex : ` This text is very important `

Without JSFiddle (1 / 2)

1. Open a basic text editor (notepad / bloc-notes / ...)
2. Copy/Paste the following code :

```
<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8">
<title>Title of the document</title>
</head>

<body>
Content of the document.....
</body>

</html>
```

Without JSFiddle (2 / 2)

3. Modify the “title of the document” and the “content of the document”
4. Save as “helloworld.html”
5. Close and open the file with your browser
